

Surface water extractor plugin – Installation guide

This plugin was developed by KTH dES in order to automate the process of extracting surface water attributes to indicative crop location. This brief document provides instructions on how to install the plugin and make it available for use in QGIS, in eight discernible steps.

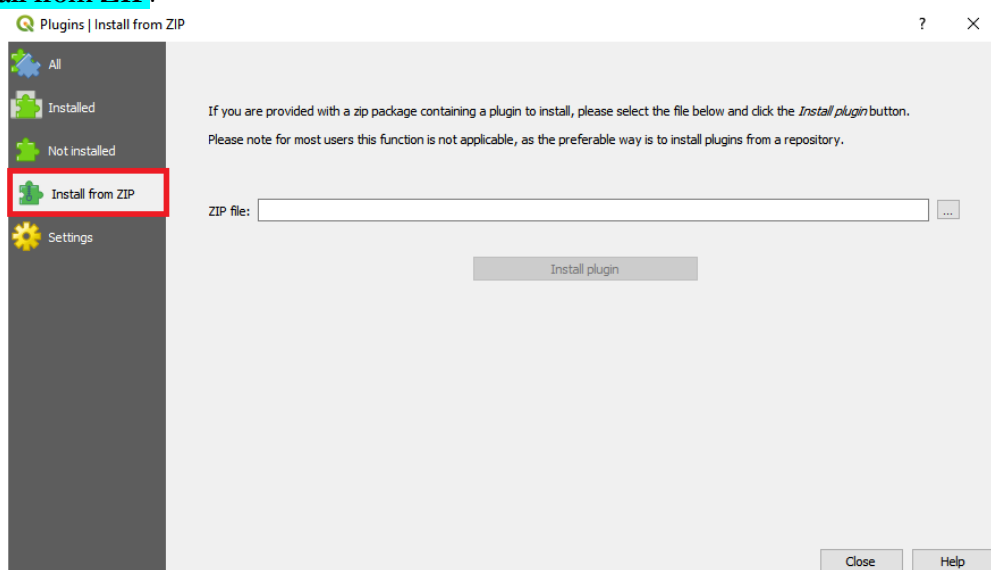

1. Download the [Surface Water Extractor](#) zipped folder.
2. Open **QGIS Desktop**. Make sure that you use version 3.0 or newer.
3. Navigate to **Plugins**, one of the menu options on the top of the window.

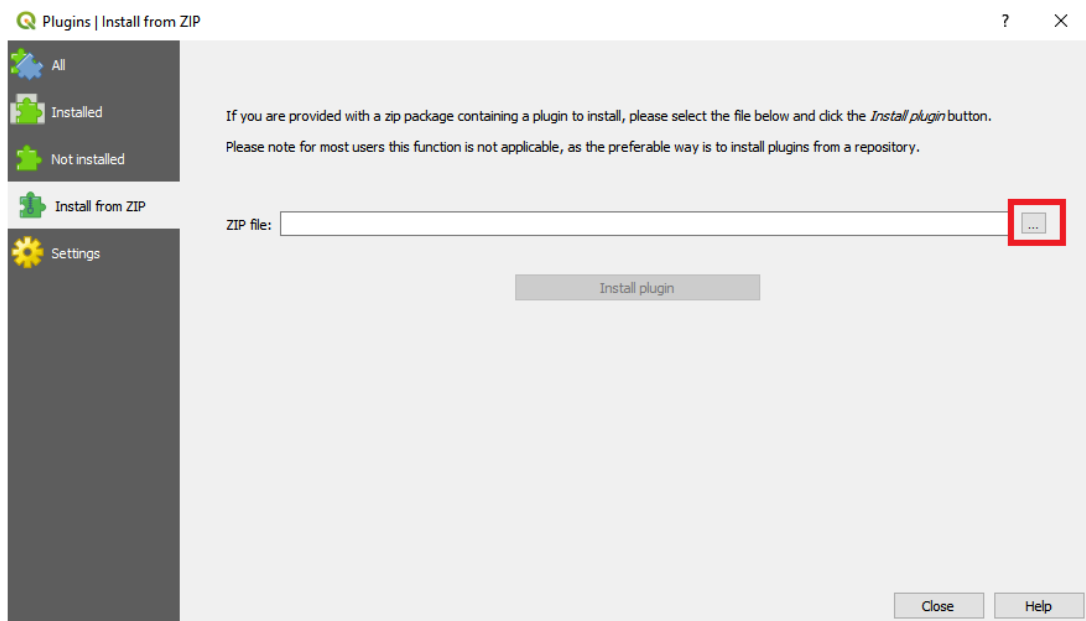

4. Next, select **Manage and Install Plugins**.

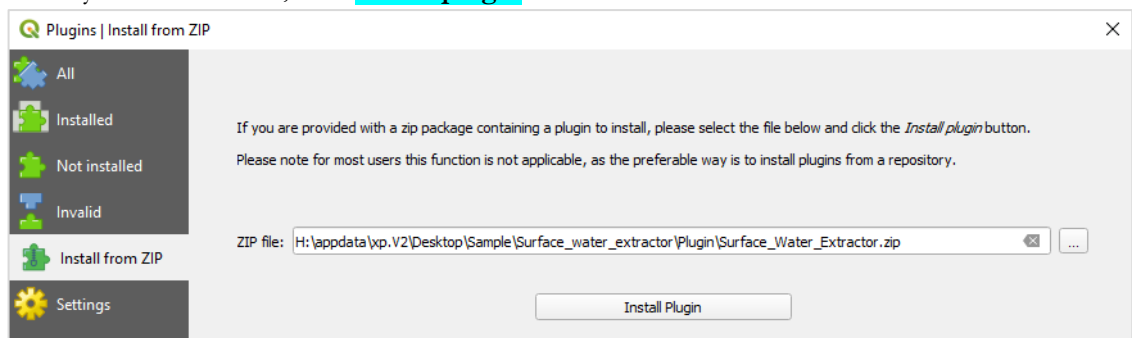

5. This will open a new window with a number of different options on the left-hand side. Choose **Install from ZIP**.

6. In the window that opens click on the **three dots** next to the empty field to navigate to wherever you saved the zipped plugin folder.

- When you have found it, click **Install plugin**.

- After the plugin has been installed will appear under the **Plugins** menu on top of the screen. You are now ready to run the plugin.

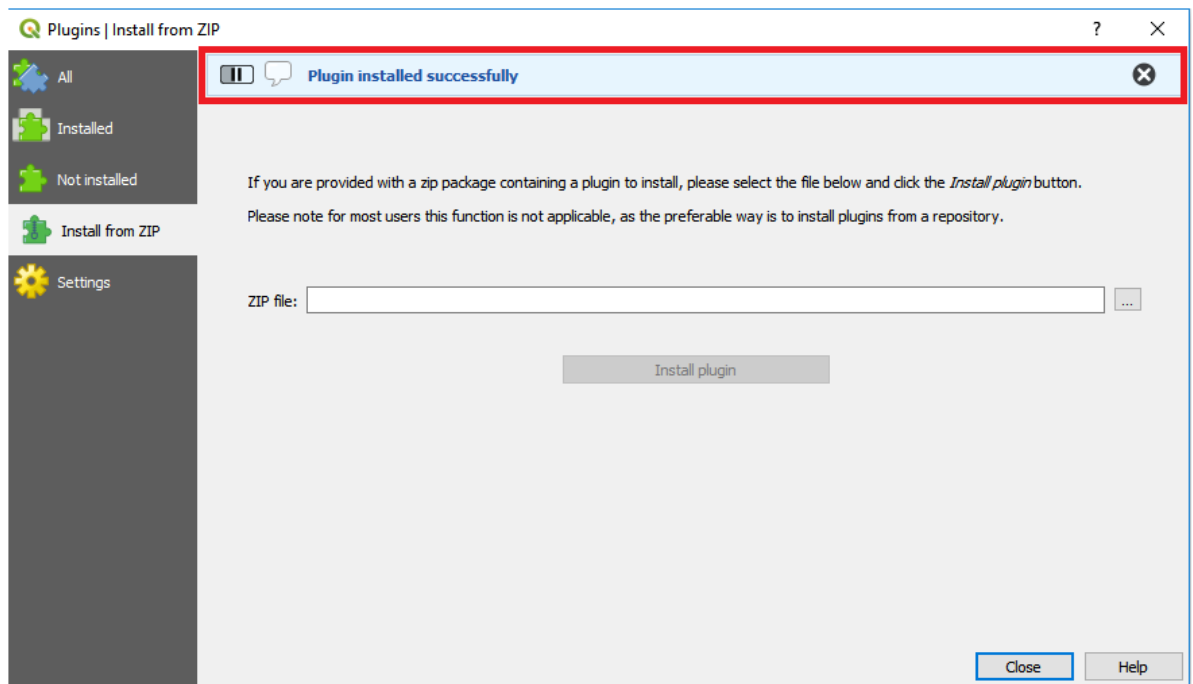

Figure 1. This field will appear when the install is completed

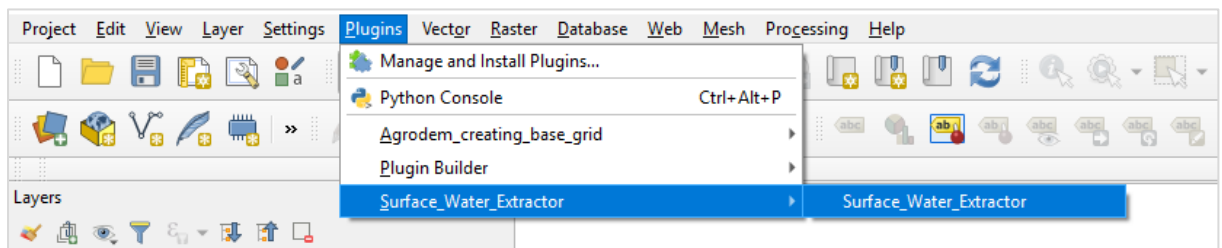

Figure 2. When the plugin is installed it will appear under the Plugins menu with the name "Surface_Water_Extractor".
